## **DETAILED ACTION**

### ***EXAMINER'S AMENDMENT***

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with Belinda Lee on October 12, 2005.

The application has been amended as follows:

#### **In the specification:**

(A) In page 2, under section 0006.

- a) Line 8, after "circuit pattern" insert --116--.
- b) Line 16, after "surface of" delete [the] and insert --a--.

(B) In page 3, line 1.

- a) Line 17, after "pad" delete [112] and insert --110--.

### ***REASONS FOR ALLOWANCE***

3. Claims 1 – 11 are allowed.

4. The following is an examiner's statement of reasons for allowance:

The prior art of record does not teach or suggest, either singularly or in combination, at least a passivation layer, covering a chip surface, wherein the passivation has an opening to expose a bonding pad, wherein a top-view profile of the opening is composed of a straight line or a curving line and an arc connecting to two ends of the straight line or the curving line and the arc is segment of a circle or an ellipse, and the straight line or the curving line is adjacent to a connection terminal between a transmission line and the bonding pad. Harada et al. (U. S. Pat. No. 6,417,575) teaches a passivation layer, covering a chip surface, wherein the passivation has an opening to expose a bonding pad, wherein a top-view profile of the opening is composed of a straight line and an arc, Kudo (JP 55-138,872) teaches a passivation layer, covering a chip surface, wherein the passivation has an opening to expose a bonding pad, wherein a top-view profile of the opening is composed of an arc and Barrow (U. S. Pat. No. 5,875,102) teaches a passivation layer, covering a wiring board surface, wherein the passivation has an opening to expose a bonding pad, wherein a top-view profile of the opening is composed of a curving line and an arc. However, Harada et al., Kudo and Barrow do not teach at least a passivation layer, covering a chip surface, wherein the passivation has an opening to expose a bonding pad, wherein a top-view profile of the opening is composed of a straight line or a curving line and an arc connecting to two ends of the straight line or the curving line and the arc is segment of a circle or an ellipse, and the straight line or the curving line is adjacent to a connection terminal between a transmission line and the bonding pad as set forth in claims 1 and 6.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
